

## **BOUNDARIES (STUDENT PAGE)**

Changes to a biological community do occur over time. Compare the plant distribution up near the mountains, along the trail, and in the wash.

**Compare the size of the pieces that make up the soil in the wash and the soil on the trail? How are they different?**

**What boundaries are around to cause the different plant distributions?**

**Why is the stone pillar here and how long will it last compared to the mountains?**

**What crosses boundaries?**

**What is far to a human, an animal, and a plant?**

*Leave No Trace . . . Walk on the Main Trail*

“The most glorious value of the wilderness is that in it a person may bury himself in the timeless oblivion of nature.”

**Bob Marshall**
